Seeing a black head is not a 100% accurate method when determining whether or not a snake is a type of poisonous coral or a king snake, etc. Remember the old saying: "red and yellow will kill a fellow." What this means is that RED AND YELLOW ARE NOT SEPARATED - the red and yellow bands touch. The California Mountain King Snake has a black head but does not have red and yellow bands that touch.

Sustainable non-chemical methods of pest control . After monitoring efforts in which pests are detected, farmers can compare the severity (damage to plants and number of pests per area) to the economic threshold levels that have been established.

### **How to practice Integrated Pest Management?**

Pesticide resistance describes the decreased susceptibility of a pest population to a pesticide that was previously effective at controlling the pest. Pest species evolve pesticide resistance via natural selection: the most resistant specimens survive and pass on their acquired heritable changes traits to their offspring.. Cases of resistance have been reported in all classes of pests (i.e ...
