1. Introduction. Plant-bacteria associations have been studied for many decades. However, a complete understanding of the mechanisms utilized by plant growth-promoting bacteria had remained somewhat elusive, often making it difficult to take full advantage of these complex relationships to reproducibly improve the growth of plants in an applied setting.

Phytosterols, which encompass plant sterols and stanols, are phytosteroids, similar to cholesterol, which occur in plants and vary only in carbon side chains and/or presence or absence of a double bond. Stanols are saturated sterols, having no double bonds in the sterol ring structure. More than 200 sterols and related compounds have been identified. ...

Butyrate is the preferred fuel of the colonocyte, therefore it is essential. If you haven't read my thoughts on the term "preferred", the point is that what a cell will consume first isn't necessarily the fuel that is the healthiest, though it certainly can be. Other reasons could be to get rid of it, or to access the metabolites.

The finding that more CO₂ in the atmosphere will warm the climate dates back to the 1890s. Attacks on the credibility of climate science are perpetuated by vested interests, including the fossil fuel industry, which has pumped millions of dollars into creating uncertainty about our understanding of climate change.

The truth is that no hormones are used in poultry production. Even though the truth speaks for itself, the poultry industry must be vocal if we expect the message to be heard, according to Dr Tom Tabler (Extension Professor), Jessica Wells (Extension Instructor) and Dr Wei Zhai (Assistant Research Professor, Poultry Science) of Mississippi State University Extension Service.
