Heparin Induced Thrombocytopenia Fifth Edition

Heparin is a drug used to treat people who have dangerous blood clots or to prevent clots in those with a high risk of developing them. Heparin anti-Xa blood tests are sometimes used to monitor and adjust standard heparin therapy.

Bleeding disorders may arise from problems with platelets, either from a low count in the blood or from dysfunctional platelets. A CBC, which includes a platelet count, may reveal a low number while platelet function tests may indicate that dysfunctional platelets are present. Several follow-up tests may be required to determine the cause.

Benoit Misset MD, Islem Ouanes MD, in Critical Care Secrets (Fifth Edition), 2013. 1 What are severity scores?. Scoring systems have been developed to compare the severity of disease among patients in intensive care units (ICUs). These scores are established at admission or during the ICU stay, and they are widely used in the ICU; other scores were recently developed to be used at ICU ...

INTRODUCTION — Pregnancy presents a unique set of problems for women with prosthetic heart valves. Prosthetic heart valves may be mechanical or bioprosthetic (the latter including heterografts and homografts). Mechanical heart valves are associated with an increased incidence of thromboembolic events during pregnancy.

Myocardial infarction, commonly known as a heart attack, is the irreversible necrosis of heart muscle secondary to prolonged ischemia. This usually results from an imbalance in oxygen supply and demand, which is most often caused by plaque rupture with thrombus formation in a coronary vessel, resulting in an acute reduction of blood supply to...
