**Osmium Tetroxide Solution**

Osmium(VIII) oxide forms monoclinic crystals. It has a characteristic acrid chlorine-like odor. The element name osmium is derived from osme, Greek for odor. OsO<sub>4</sub> is volatile: it sublimes at room temperature. It is soluble in a wide range of organic solvents. It is also moderately soluble in water, with which it reacts reversibly to form osmic acid (see below).

**Osmium tetroxide - Wikipedia**

Osmium (from Greek ὀσμή osme, "smell") is a chemical element with symbol Os and atomic number 76. It is a hard, brittle, bluish-white transition metal in the platinum group that is found as a trace element in alloys, mostly in platinum ores. Osmium is the densest naturally occurring element, with an experimentally measured (using x-ray crystallography) density of 22.59 g/cm<sup>3</sup>.

Osmium: isolation. Isolation: it would not normally be necessary to make a sample of osmium in the laboratory as the metal is available, at a price, commercially. The industrial extraction of osmium is complex as the metal occurs in ores mixed with other metals such as ruthenium, rhodium, palladium, silver, platinum, and gold.

You are here: Home > Chemical Categories > Choking/Lung/Pulmonary Agents (Irritant/Corrosive - Inhalation Toxidrome) Choking/Lung/Pulmonary Agents (Irritant/Corrosive - Inhalation Toxidrome) Choking/lung/pulmonary agents are chemicals that cause severe irritation or swelling of the respiratory tract (lining of the nose, throat, and lungs).

**Choking/Lung/Pulmonary Agents (Irritant/Corrosive ...**

Tris-HCl (pKa = 8.06) and maleate (pKa = 6.26) have a working range of pH 5.0-8.6 and may be used successfully to buffer staining solutions (e.g., Toluidine Blue O). Avoid Tris with aldehyde fixatives or osmium tetroxide, however, as the aldehydes react with the amino group of Tris, resulting in the loss of buffering capacity.

Osmol definition is - a standard unit of osmotic pressure based on a one molal concentration of an ion in a solution.

**Osmol | Definition of Osmol by Merriam-Webster**

The following list includes the staining methods used on the slides in the loan collection. It gives a brief sketch of their selectivity, mode of action, and procedure. They are arranged in alphabetical order for ready reference. The abbreviations are those used in the catalogue of the loan ...

**Histology Laboratory Manual - Columbia University**

An electron microscope is a type of microscope that uses electrons to illuminate a specimen and create an enlarged image. Electron microscopes have much greater resolving power than light microscopes and can obtain much higher magnifications. Some electron microscopes can magnify specimens up to 2 million times, while the best light microscopes are limited to magnifications of 2000 times.

**Electron microscope - New World Encyclopedia**

Our strategy to generate functional  $\beta$  cells from hPSC in vitro is outlined in Figure 1A. To produce large numbers, we used a scalable suspension-based culture system that can generate  $>10^8$  hPSCs and later differentiated cell types (modified from Schulz et al., 2012). Clusters of cells ( $\sim 100\text{--}200\ \mu\text{m}$  in diameter, each cluster containing several hundred cells) from a human embryonic stem ...
